

# Choose Hygiene. Choose HEPA.

## What is 'HEPA'?

HEPA stands for 'High Efficiency Particle Arrestor', which works to trap tiny particles (up to 0.3 micrometers in diameter) found in the air.

## Why they're great

ATC HEPA filters capture 99.9% of harmful particles, giving you a seamless, hygienic hand drying experience.

## Maintenance

You change your coffee filter regularly, right? The same applies to HEPA filters. Make sure to change your HEPA filter every 6 months – those particles add up, and over time reduce the effectiveness of the filter.

## A closer look

ATC HEPA filters are composed of thin fibres of glass and carbon-activated material. The result is a thick, paperlike material arranged in pleats. Particles passing through the air are trapped within this material.

## Did you know?

The Panther HEPA filter comes complete with an anti-bacteria layer, and stylish stainless steel outer casing for a sleek finish.

Simply slide in or out for install and removal!
